

ABOUT PTC THERAPEUTICS

PTC Therapeutics is a mid-sized biopharmaceutical company focused on the discovery and development of orally administered, proprietary small molecule drugs that target post-transcriptional control processes. While PTC's discovery programs are directed at targets in multiple therapeutic areas, PTC is focusing particularly on the development and commercialization of treatments for orphan and ultra-orphan disorders. Post-transcriptional control processes regulate the rate and timing of protein production and are essential to proper cellular function. PTC's internally discovered pipeline addresses multiple therapeutic areas, including neuromuscular disorders, oncology, and infectious diseases. For more information on the company, please visit our website www.ptcbio.com.
